

3 cases that View-Model is a must

Case 1 – Security:

If the model has a sensitive data

Example:

The user model contains a (password/role)

Case 2 – Data from different models:

The page will present data from 2 or more tables.

Example:

Department page shows the (Dept_Name/ Student name/ courses)

Case 3 – Calculated data:

The page will present calculated values that aren't in the DB.

Example:

When you use the (count) function to preview a new value.
